

## **ISES Tri-State Regional Chapter (New Jersey, New York, Pennsylvania)**

### **Objectives**

The Tri-State Chapter is for members within the geographical area of New Jersey, New York and Pennsylvania. The objectives of the Tri-State Chapter are:

- A. To foster, promote and advance the science of exposure analysis related to environmental stressors in human populations and ecosystems.
- B. To promote communication among scientists, regulatory personnel, general public and other individuals or organizations in the region interested in exposure science.
- C. To strengthen the impact of exposure science on environmental policy of the region.
- D. To serve as the focal point for interaction of members of the Society and other interested individuals from academia, government and industry in the Tri-State region, i.e., to provide communication and interaction opportunities for researchers, particularly young investigators and scientists associated with state and local government whose opportunity to travel to national meetings is limited.
- E. To further understanding, awareness, and appropriate applications of exposure science, and to promote an exchange of ideas, communication and practical experiences among members of the academic, professional, industrial and regulatory communities engaged in exposure science; e.g., exposure scientists, epidemiologists, toxicologists and other scientists in academia, government and industry in the Tri-State region.
- F. To disseminate exposure information and concepts to all interested individuals.
- G. To hold scientific and educational meeting and workshops.
- H. To act as a resource for and provide support to the Society.
