

Assistant/Associate Professor

**University of Texas School of Public Health
Houston, TX**

The selected candidates will be expected to establish an extramurally-funded program of independent and collaborative research, contribute to the educational mission of the School through teaching and advising masters and doctoral students, and perform community service. Research areas may include, but are not limited to, environmental pollution and human health, gene-environment interactions, industrial hygiene, and mechanisms of environmental disease. The research environment in the Texas Medical Center and throughout the regional campuses provides unparalleled opportunities to collaborate with interdisciplinary researchers, including the UTSPH Human Genetics Center and the Brown Foundation Institute of Molecular Medicine for the Prevention of Human Diseases within The University of Texas Health Science Center at Houston.

Qualifications include: (1) an earned doctorate in an appropriate discipline; (2) a record of, or high potential for, obtaining peer-reviewed funding and publications through independent and collaborative research in the area of specialization; (3) commitment to excellence in teaching and advising graduate students; and, (4) excellent written and oral communication skills.
